

PalmScan™ Mobile USB B-Scan

MMD's Portable and Versatile Ultrasound Imaging

Turn any PC* with a USB port into a high resolution B-Scan

Solutions that Fit

PalmScan™ Mobile USB B-Scan

Turn any PC into a B-Scan device capable of high-resolution ultrasonic imaging. Requires USB 2.0 Interface or higher

The Mobile B-Scan is MMD's portable and extremely versatile ultrasound device.

The B-Scan is easy to use with custom settings and a patient database.

The Mobile B-Scan is not only convenient but efficient and accurate with high resolution imaging that gives over 2048 sample points per line. Mobile B-Scan has a probe frequency of 12/15MHz, a 3 to 10 penetration depth and with its dual calipers you can easily measure the structure within the eye.

Printing and capturing images of the eye have never been easier. Simply select desired images for your report and generate reports that can be sent to your existing office printer or store movies or JPEG images right to your PC's hard drive. Adjustable size cine buffers with a maximum of 512 buffers ensure that you always capture your best images.

FEATURES

Easy to Use

Custom settings for multiple users.

Patient Database

Virtually unlimited in size depending on PC memory capacity.

High Resolution Imaging

2048 samples per line
